

StaFull Development Plan — Going Forward

Phase 1: Stabilize Current State (Immediate)

Verify Clean Baseline

- Run git status
- Run git log -5 --oneline
- Test all 11 portal logins
- Document broken features

Commit Current State

- Commit uncommitted changes
- Push to remote
- Tag v1.0-baseline

Backend Integration

- Decide backend git strategy
- Commit backend if included
- Test frontend/backend connection

Phase 2: Fix Known Issues

Duplicate Dashboard Files

- CustomerDashboard duplicates
- DriverDashboard duplicates
- FranchiseDashboard duplicates

Rules: One deletion at a time, test, commit

Logo SVGs

- Review 12 modified files
- Decide correct versions
- Commit or reset
- Verify UI rendering

Auth Flow

- Login tests per role
- Correct redirects
- Token clear & refresh

Phase 3: Portal-by-Portal Audit

Process for Each Portal

- Audit current state
- Fix one file at a time
- Test thoroughly
- Commit per fix

Portals Covered

- Holdings Admin
- Franchise Owner
- Manager
- Dispatcher
- Driver (landscape lock)
- Customer
- Fleet Manager
- Employer
- Employee
- Investor
- SBA Lender

Phase 4–7: Hardening to Production

Design Compliance

- Approved reds only
- Montserrat typography
- 8px spacing
- Component rules

Backend Completion

- Prisma & migrations
- API validation
- WebSocket testing

Testing & Deployment

- Unit, integration, E2E tests
- Build verification
- Railway → AWS deployment
- DNS: stafull.com

Priority Order

Now → Baseline

Next → Dashboards

Then → Backend

Later → Design, Testing, Deploy
